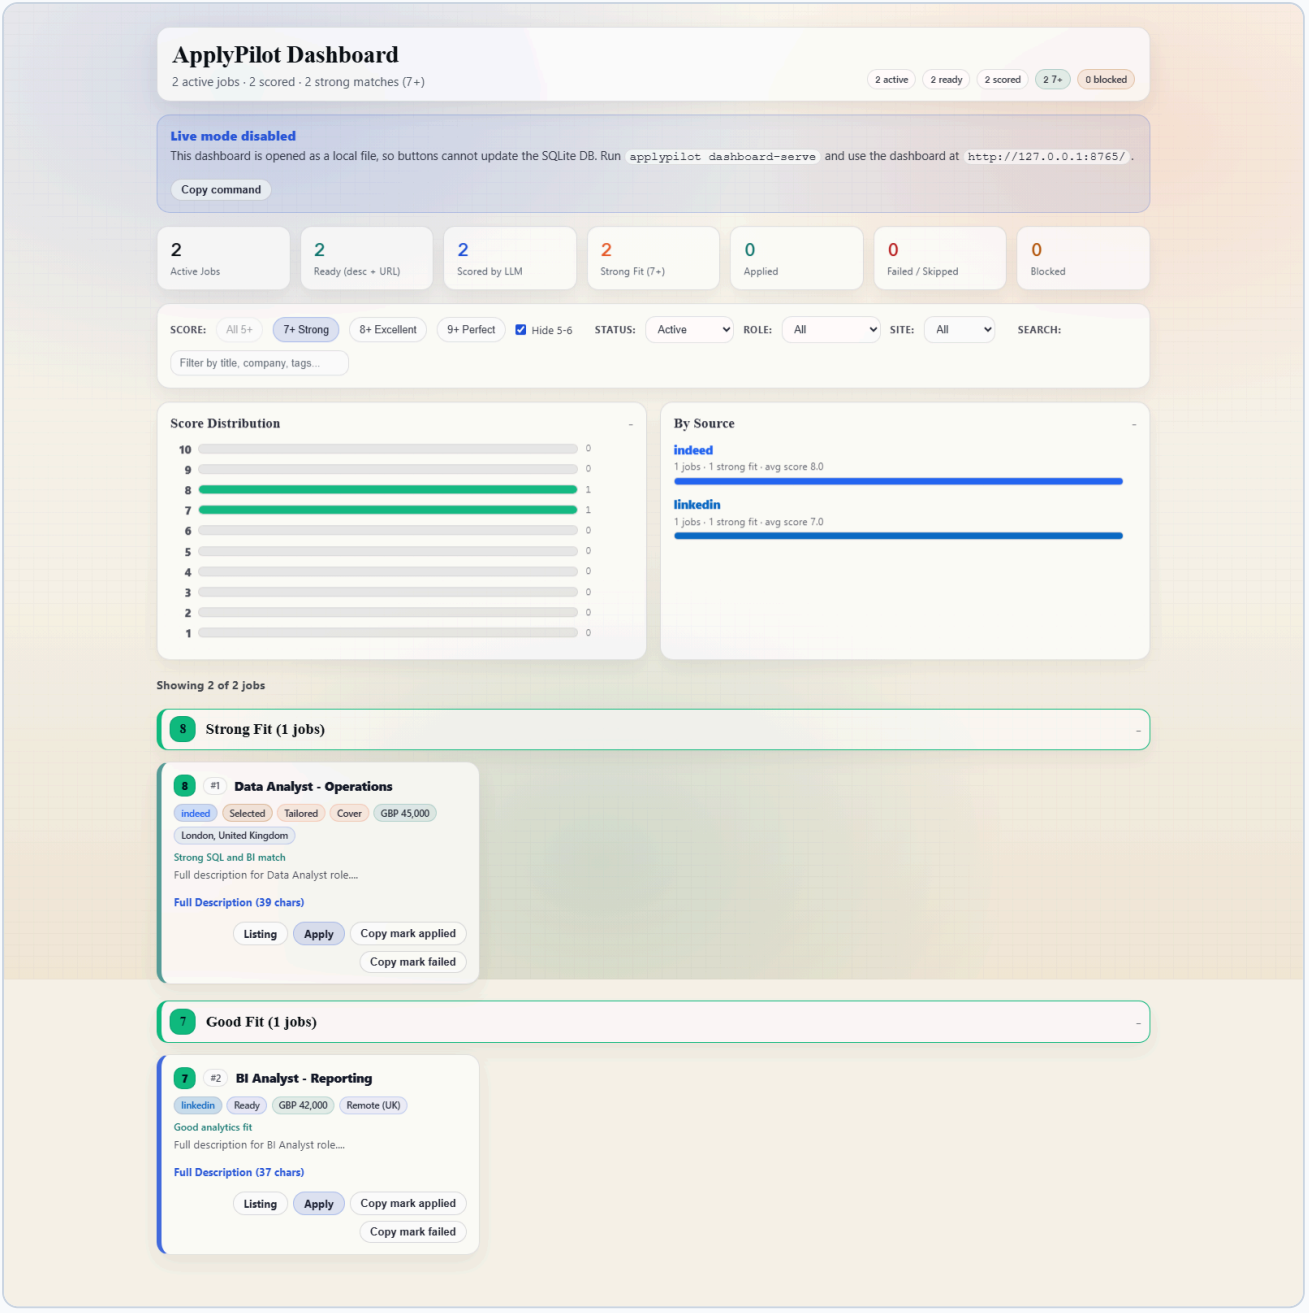
ApplyPilot Training: Click-by-Click

Use this when onboarding new users. Follow each step exactly in dashboard mode.

> Start dashboard first:
> `applypilot dashboard-serve --multi-user` or `docker compose up --build`

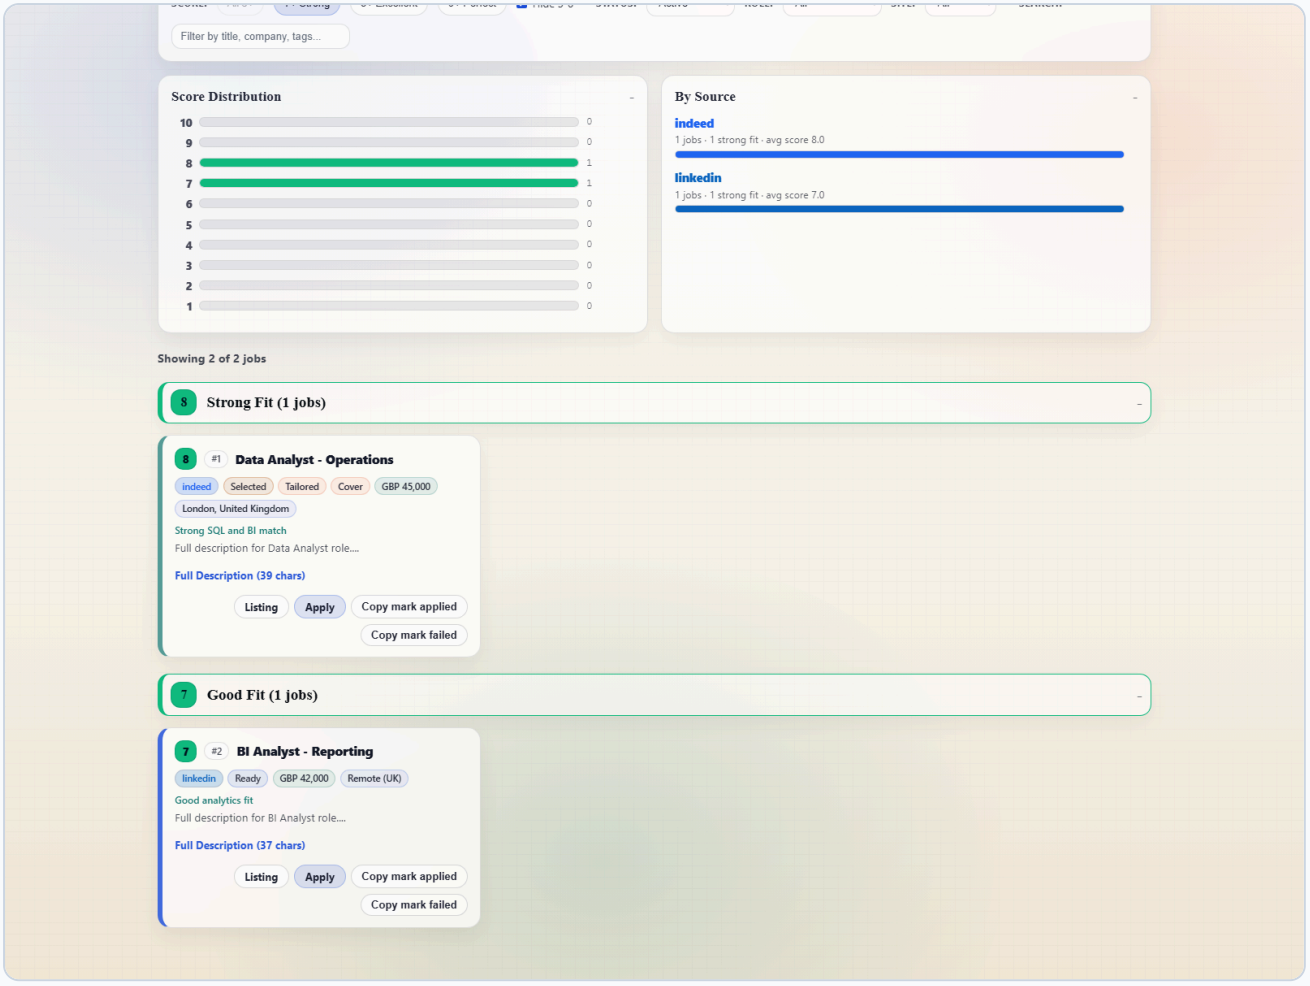
Step 1: Open Dashboard and Understand Main Areas

1. Open `http://127.0.0.1:8765`.
2. Locate three key areas: job filters, pipeline controls, setup panel.
3. Use this screen as the main operating center.



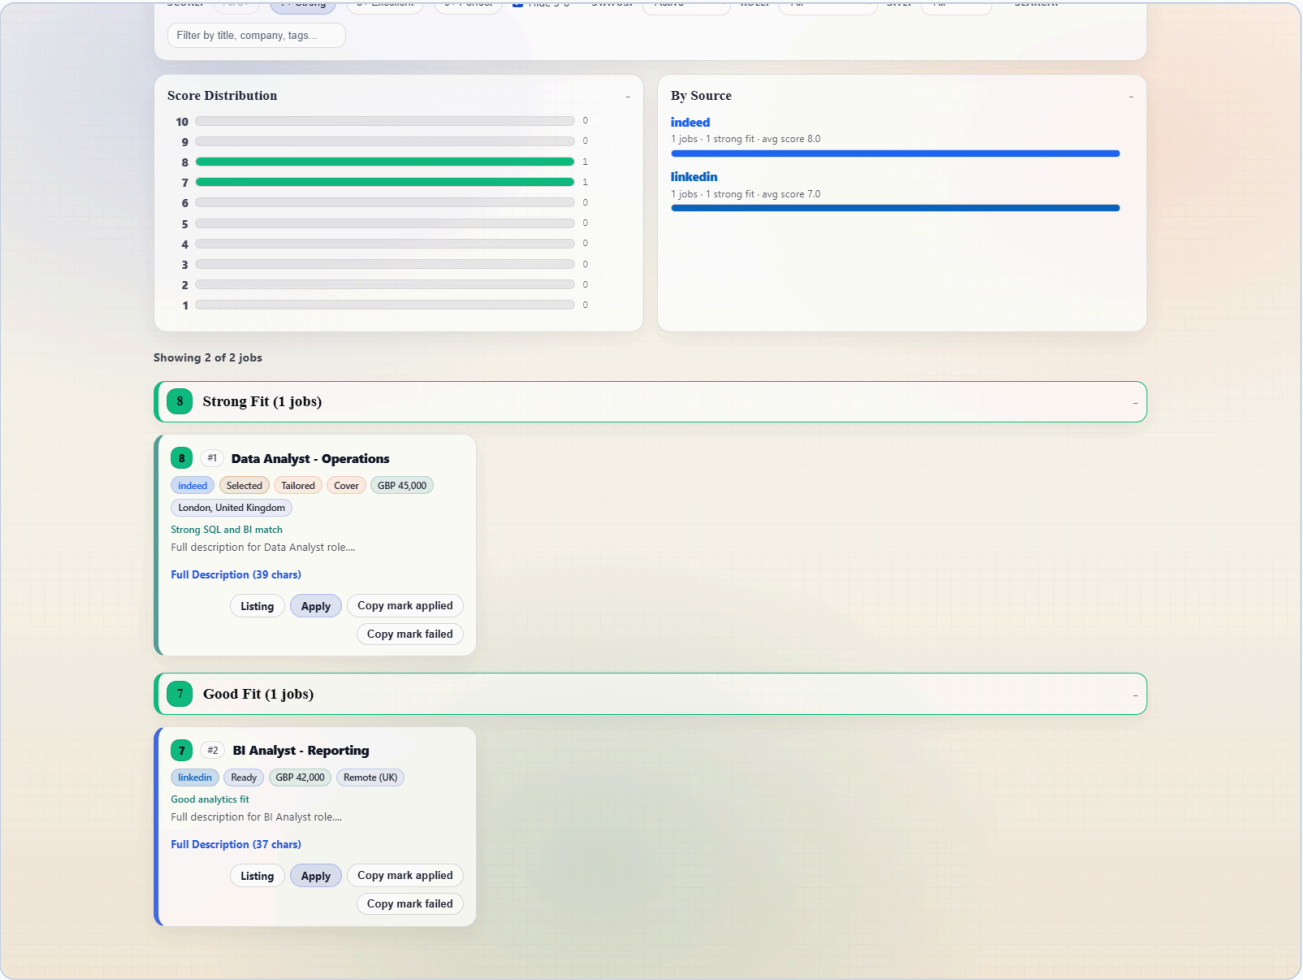
Step 2: Use Pipeline Controls Correctly

1. Run stages in order: Discover -> Enrich -> Score.
2. Use toggles like **Selected only** when targeting specific jobs.
3. Use Stop if a run is taking too long.



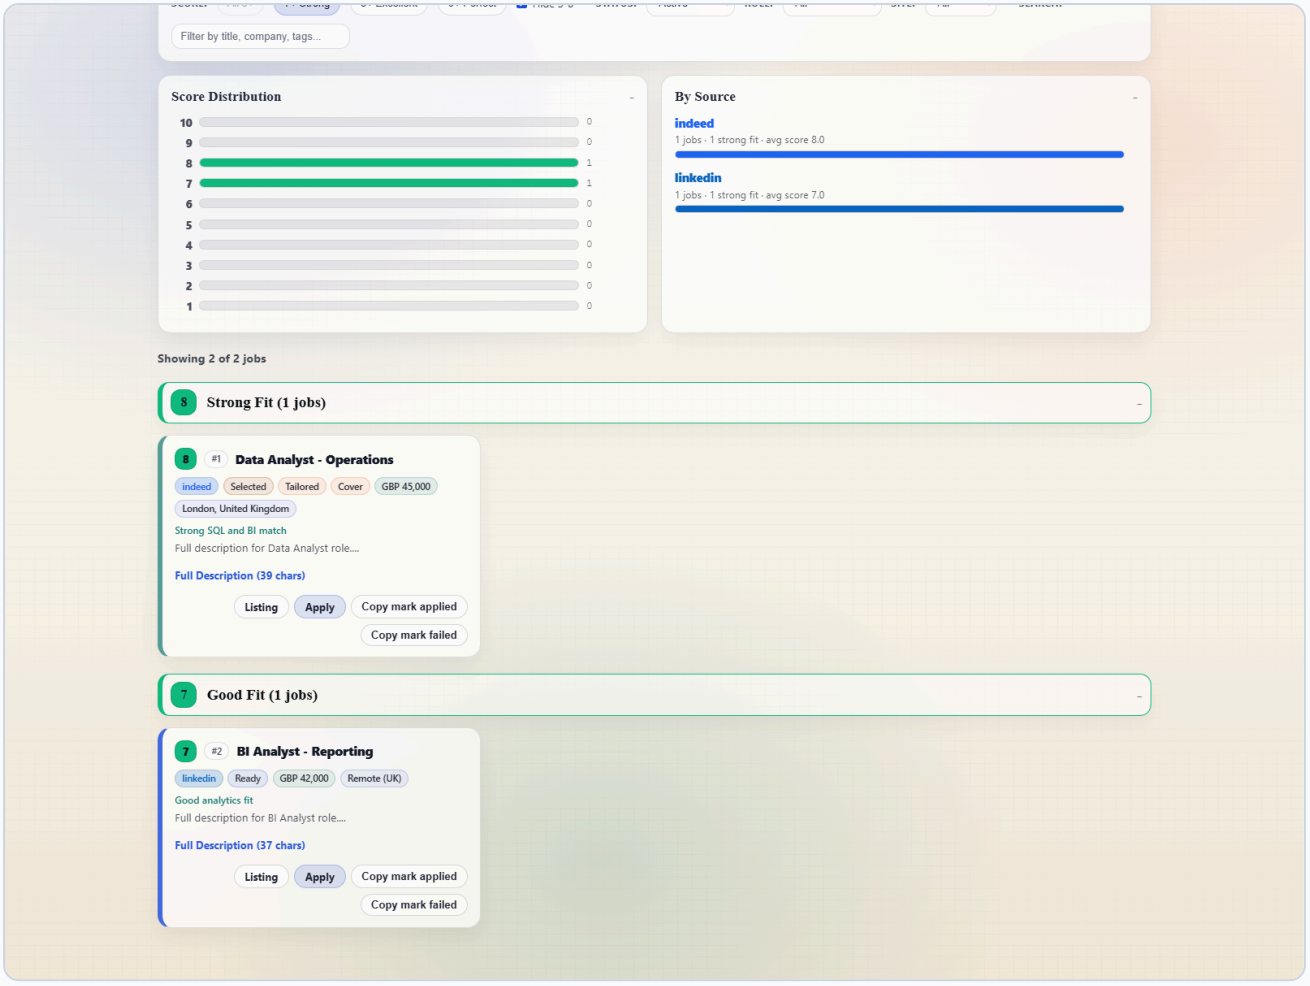
Step 3: Manage Jobs from Card Actions

1. Click **Pick** on high-fit jobs you want to tailor/apply first.
2. Use **Applied**, **Failed**, **Block** as needed.
3. Avoid deleting jobs unless they are clearly irrelevant.



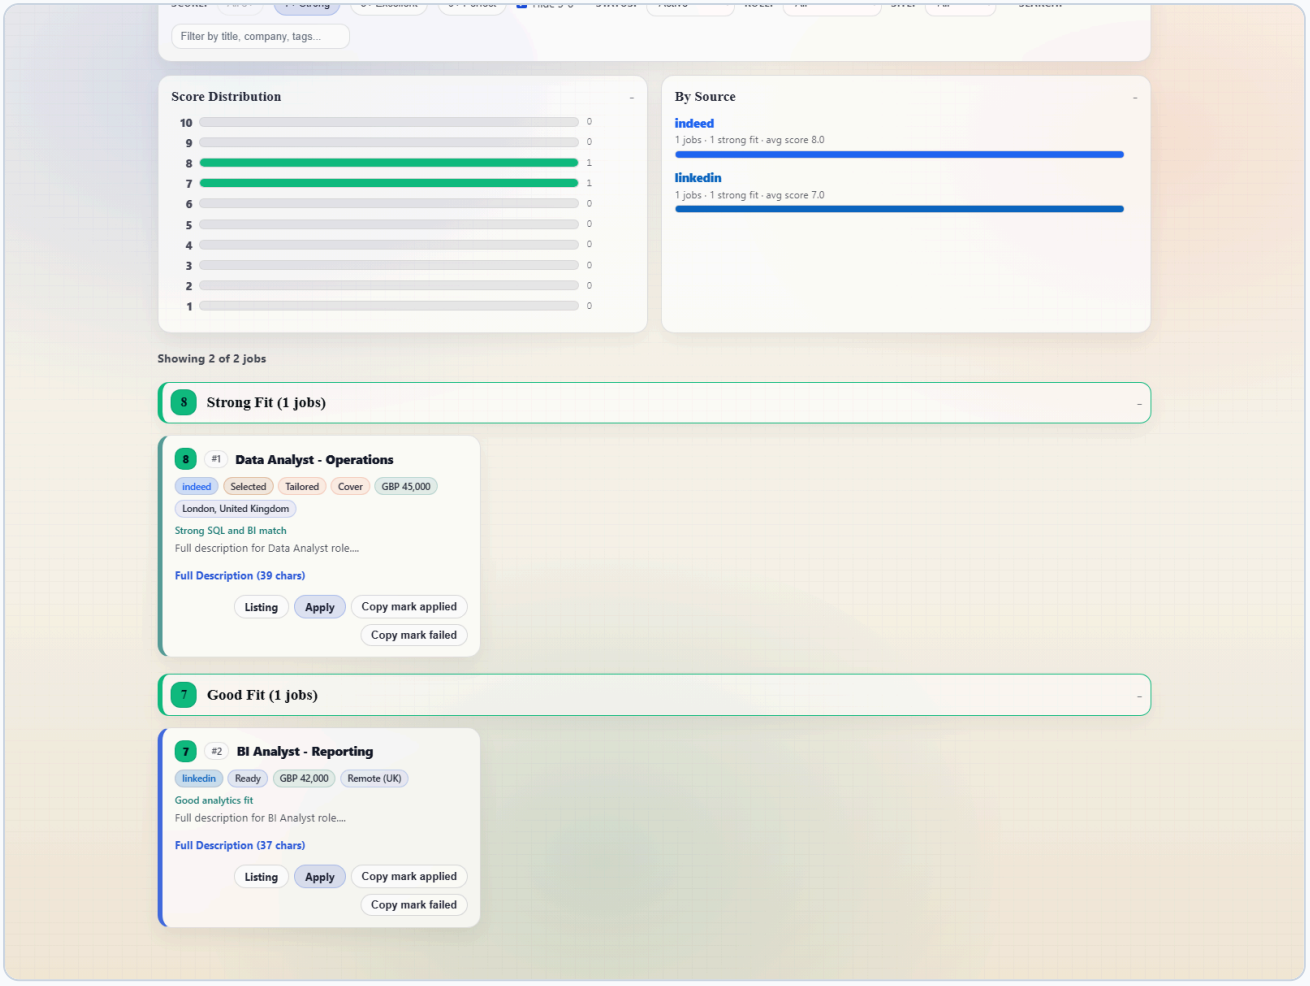
Step 4: Complete Full Profile Editor (Required)

1. Open Setup -> **Full Profile Editor**.
2. Fill all critical fields: name/email, work authorization, compensation, experience.
3. Click **Save full profile**.



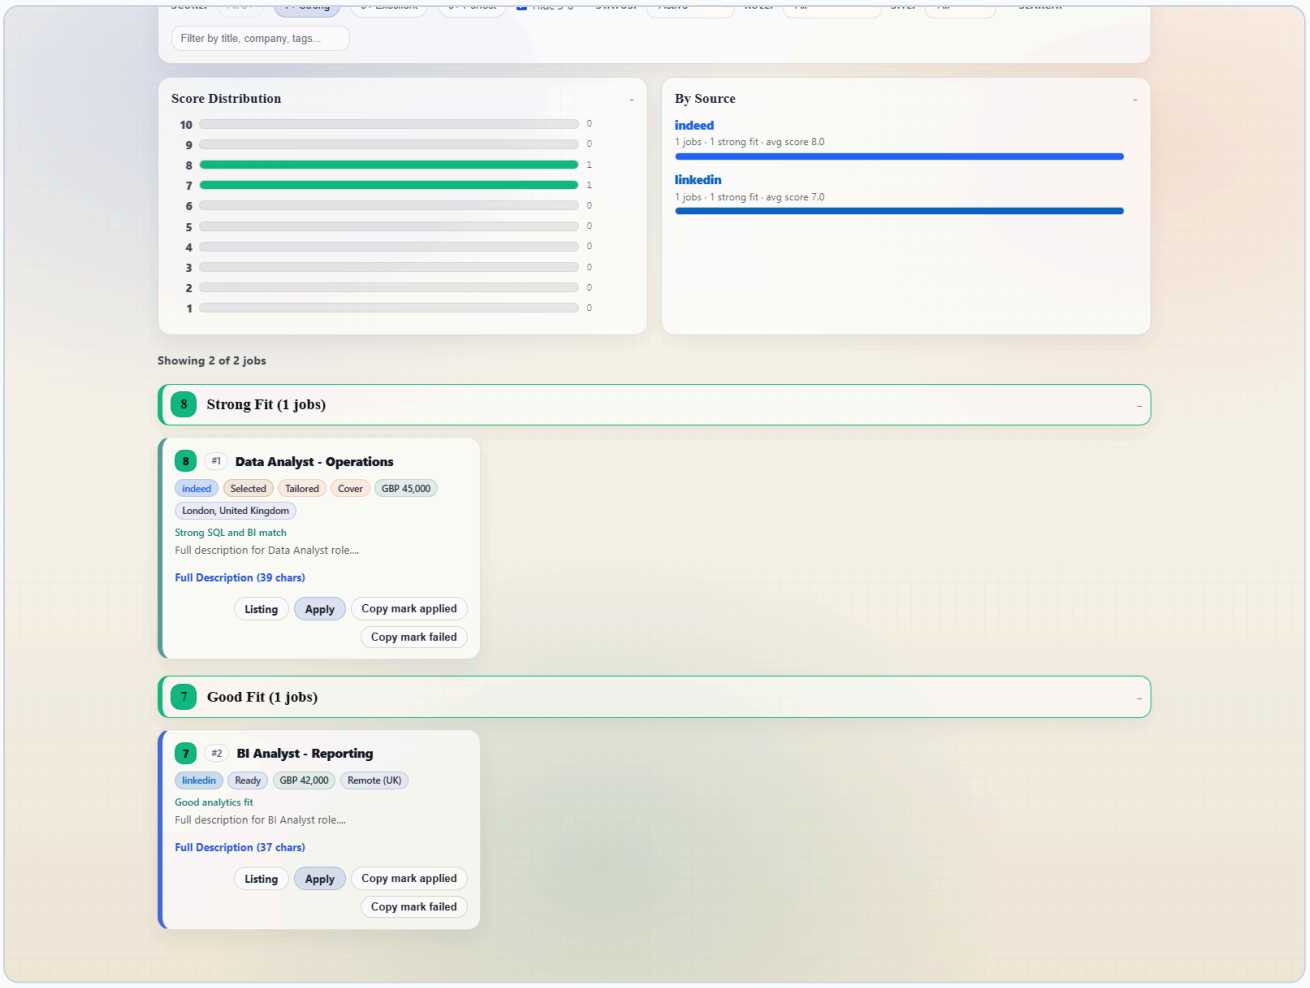
Step 5: Configure Tailoring Intelligence

1. Keep Role Pack on **Auto** unless you are role-specific.
2. Use Resume Template Builder to add skills, certifications, education, metrics.
3. Click **Save tailoring config** after changes.



Step 6: Build Search Config

1. Use builder mode for non-technical users.
2. Set countries/locations/roles/results thoughtfully.
3. Save `searches.yaml` and run Discover again.



Step 7: Tailor Only Selected Jobs (Best Practice)

1. Pick jobs first.
2. Tick **Selected only** in pipeline controls.
3. Run **Tailor** or click **Regenerate tailored resumes now**.

This prevents wasting tokens on low-priority jobs and improves output quality.

Step 8: Final QA Before Applying

1. Open tailored resume and cover letter artifacts for top jobs.
2. Check factual accuracy (companies, dates, metrics).
3. Run apply stage (dry-run first if needed).

Trainer Checklist

- User has unique account (multi-user mode) and isolated workspace.
- User has `GEMINI_API_KEY` in their own workspace `.env`.
- Profile, resume text, and searches are saved successfully.
- User can run discover/enrich/score and tailor selected jobs.
- User understands Applied/Failed/Block lifecycle actions.

Training complete.
